

Collections I & II Licensure Review

*1.2 WW CEUs October 18-19, Caldwell, \$250 *** Free Lunch Compliments of CHA ****

This workshop taught by Victor Coles will provide training and review for both collection system certification and day-to-day activities. Collections system maintenance discussions will include the causes and effects of hydrogen sulfide, oxygen deficiency, trench safety, and confined space entry. This exam review includes practice tests for Class I & II.

Cross Connections Basic

0.6 W/WW CEUs September 28, Nampa, \$125

This very timely workshop will outline the requirements of water purveyors in developing a cross connection program. Bill Thompson, a certified cross-connection instructor, will address all of the elements that are essential for a safe control program. Bill will cover the various types and applications of CC devices. A discussion of the Pacific Northwest codes as well as how to develop and enforce an ordinance will also be addressed. Case studies will highlight the importance of implementing and maintaining a written program.

Lagoons Operation & Maintenance

0.6 WW CEUs October 6, Caldwell, \$125

Veronica Shawcroft discusses the basics of lagoon operation and maintenance, including microbiology of a lagoon, factors affecting the efficiency of lagoons, dike maintenance, and weed control. Biochemical oxygen demand, solids, pH and loadings are addressed. Troubleshooting, preventative maintenance, data collection, and permit requirements are included. Specific problems often encountered in the field will also be discussed. This class fulfills part of the very small wastewater licensure requirements.

VSWWS Licensure Review

0.7 W CEUs September 27, Nampa, \$125

This one-day review will cover mathematics, disinfection, safety, general operation and maintenance practices, laboratory, pumping and storage, and the basic characteristics of water. Pat Brown will review example certification exam questions throughout the workshop. This course is specifically designed for operators of very small water systems.

Wastewater I & II Licensure Review
